ISIOptical Spindles and Spindle Carts

ISIOptical is pleased to add spindles and spindle carts to our product line up. The spindles are made with an aluminum base and a stainless steel rod. They are available with an assortment of different bobbins so fitting them to your machines is no problem.

The spindle carts are very heavy duty, rated for 400 pounds per shelf. The spindle plate is made of extruded PVC and is raised off of the cart shelf so the spindles are raised for added stability. We can manufacture the spindle plate to your specifications. All four casters swivel 360 degrees and have bumpers to prevent collisions with adjacent carts. Locking casters are available on request.
